CC 207B Unit 6 Exercise

Name: James C. Remegio Date: October 31, 2026

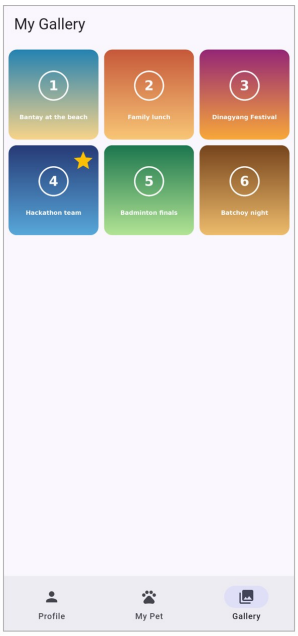

Year and Section: BSIT 3-A

Note: Upload your Flutter project to your assigned folder here -> https://github.com/WVSU-BSIT-Batch-2028/CC-207B_26-27_Activities. Read the instructions on submitting, including the file name/folder conventions in the GitHub repository.

I. My Profile App part 2. You will grow the profile app from the Unit 5 exercise. The pet's bark count will survive tab switches, a new Gallery tab will show your photos in a grid, tapping a photo will open it on its own screen and send an answer back, your hobbies will become chips, your class schedule will be a table, and resetting the bark count will ask first. Every part uses a widget from the Unit 6 slides.

Hobbies + schedule (C)

Gallery (B)

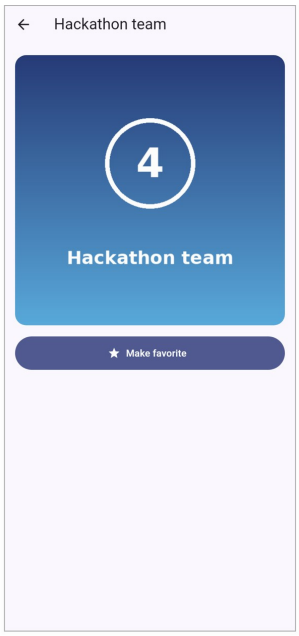

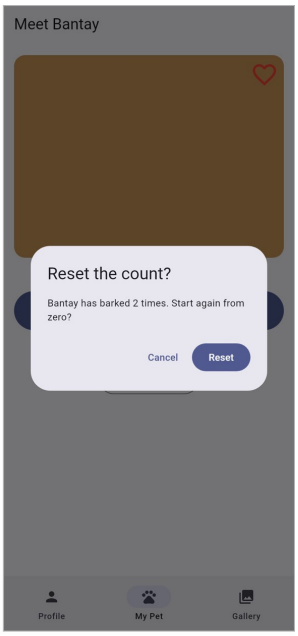

Photo screen (B)

Reset dialog (D)

A sample solution. Use your own photos, hobbies and schedule.

Before you start, make sure you have performed the following:

1. Copy your Unit 5 exercise project and rename the copy `<lastname>_unit6_exercise` (follow the naming convention in the submissions repository).
2. Add at least 6 photos to a new folder `assets/images/gallery/` (your own photos, or free ones you have the right to use). Keep them small: under 500 KB each.
3. Declare the new folder in `pubspec.yaml`, then save (or run `flutter pub get`):

```
flutter:
  uses-material-design: true
  assets:
    - assets/images/
    - assets/images/gallery/
    - assets/sounds/
```

Part A. Keep every tab alive

a. Tap the play button a few times, switch to Profile and back. The count went back to 0. In `HomeShell`, replace `_screens[_selectedIndex]` with an `IndexedStack` so the count survives.

b. Add a third `NavigationDestination`, **Gallery**, with a photo icon, and a third page in the IndexedStack.

Part B. Gallery

a. Write a `Photo` class with final fields `asset` and `caption` and a const constructor. Put at least 6 photos in a `List<Photo>`.

b. Write a `GalleryScreen` StatefulWidget with an AppBar and a `GridView.extent` with `maxCrossAxisExtent: 160`, spacing of 8 and padding of 8. Build the tiles with a collection-for. Each tile is

an `Image.asset` with `BoxFit.cover`, rounded corners (`ClipRRect`) and the caption as its `semanticLabel`.

c. Tapping a tile pushes a `PhotoScreen`, passing the photo in through its constructor.

d. `PhotoScreen` (StatelessWidget): the caption in the AppBar, the photo large, and a `FilledButton` "Make favorite" that pops back with `true`.

e. Back on the grid, if the answer is `true`, save that photo as the favorite with `setState`. The favorite tile shows a star on top of the photo (`Stack` and `Positioned`). Only one photo can be the favorite.

Starting code for the tap (fill in the rest yourself):

```
Future<void> _open(Photo photo) async {
  // push<bool> completes with what PhotoScreen pops:
  // true from "Make favorite", null from the back arrow.
  final bool? makeFavorite = await Navigator.push<bool>(
    context,
    MaterialPageRoute(builder: (_) => PhotoScreen(photo: photo)),
  );
  // TODO: if makeFavorite is true, save photo.asset with setState
}
```

Part C. Profile additions

a. Hobbies as chips. Take Hobbies out of your information rows. Put at least 5 hobbies in a `List<String>` and show them in a Card titled "My Hobbies" as `Chip`s inside a `Wrap` (spacing 8, runSpacing 8).

b. Class schedule. Write a `ClassSlot` class (day, time, subject) and a list with at least 4 of your classes. Show them in a Card titled "My Class Schedule" as a `Table` with a border, a header row (Day, Time, Subject) with a background colour from the theme and bold text, and one `TableRow` per class built with a collection-for. Use

`columnWidths` so Day and Time have fixed widths and Subject takes the rest.

c. The page still scrolls with no overflow stripes on a small phone.

Part D. Reset with a dialog

a. On the pet screen, add an `OutlinedButton` "Reset count" under the counter. It is disabled while the count is 0.

b. It opens a `showDialog<bool>` with an `AlertDialog`: Cancel pops `false`, Reset pops `true`. Reset the count only when the answer `== true`.

Evidences (Screenshot that the application is working):

Profile and hobbies

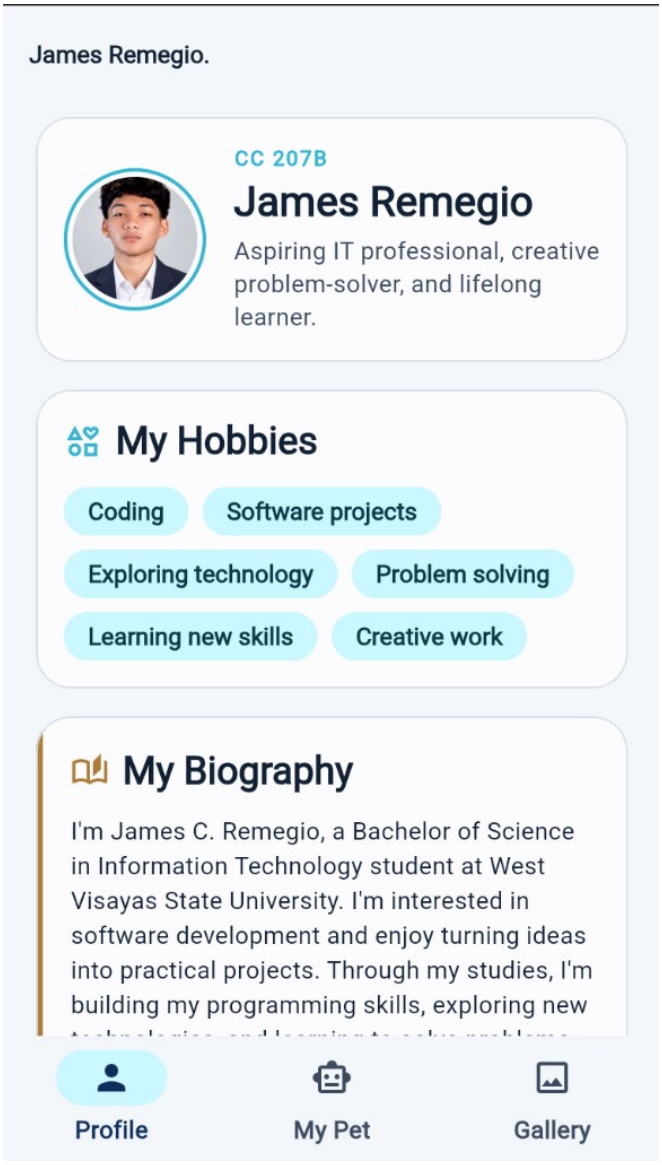

Figure 1. Profile, hobbies, and biography
The profile shows six hobby chips and the biography section.

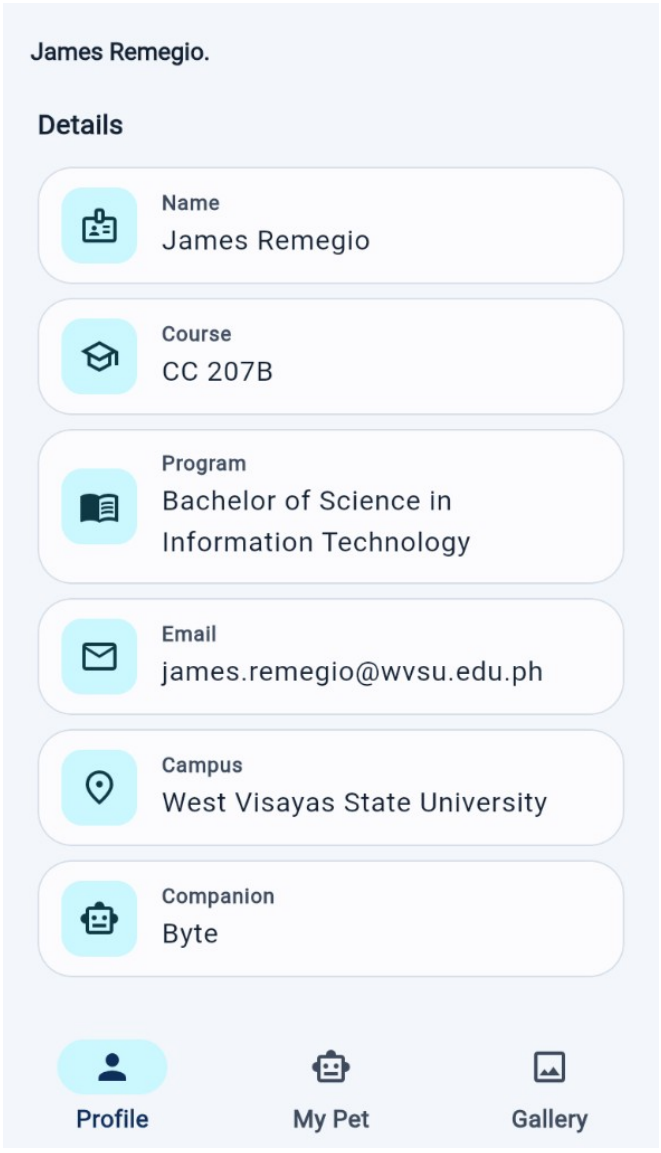

Figure 2. Profile details
Personal and academic information appears in labeled rows.

Evidences (Screenshot that the application is working):

Class schedule

Figure 3. My Class Schedule
The bordered table displays Day, Time, and Subject, including subject codes and rooms. The screenshot shows the upper portion of the scrollable schedule.

Evidences (Screenshot that the application is working):

Pet counter and tab state

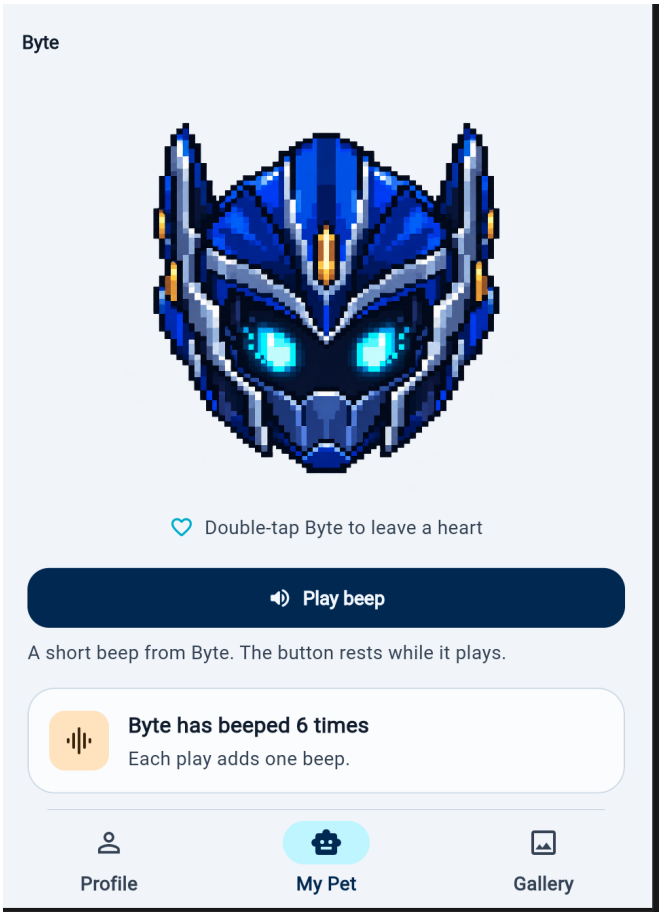

Figure 4. Counter after six beeps
Byte's counter displays six beeps. The Profile, My Pet, and Gallery navigation destinations are visible.

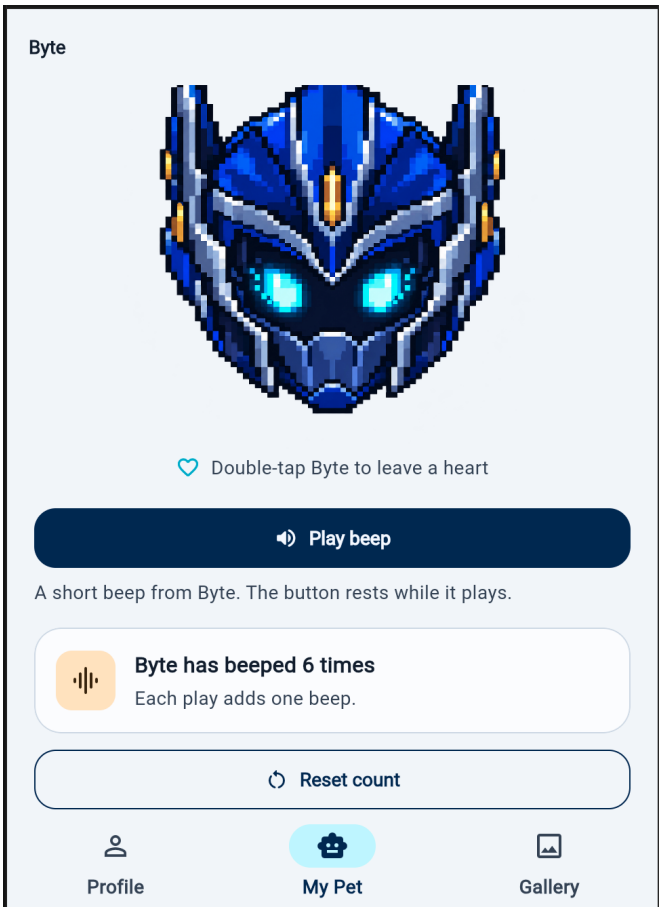

Figure 5. Counter after returning to My Pet
After switching away and returning to My Pet, the counter still displays six beeps.

Evidences (Screenshot that the application is working):

Reset confirmation and result

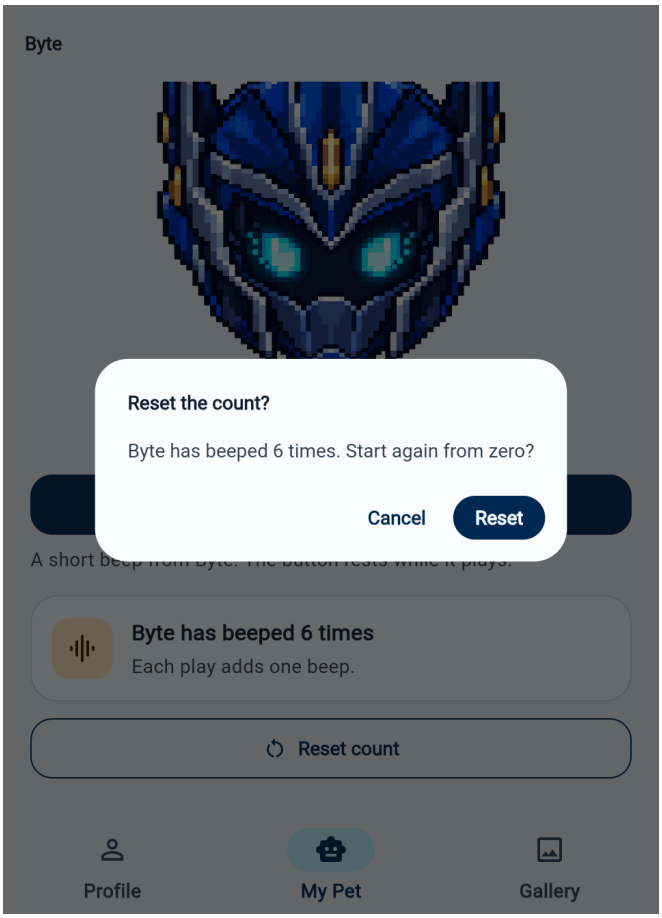

Figure 6. Reset confirmation dialog
The dialog shows a count of six and provides Cancel and Reset choices.

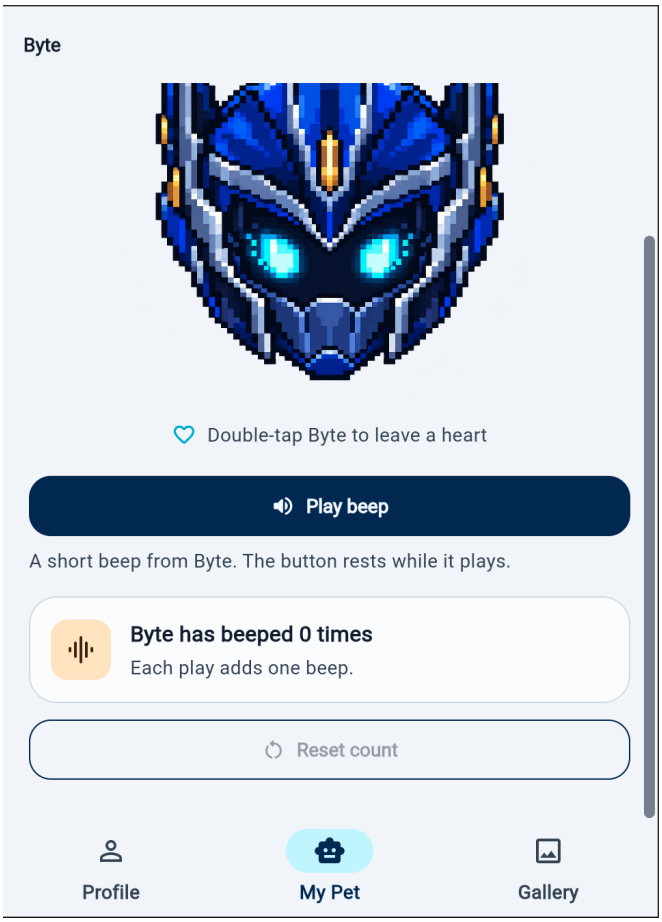

Figure 7. Counter after reset
The counter displays zero, and the Reset count button is visibly disabled.

Evidences (Screenshot that the application is working):

Gallery and favorite selection

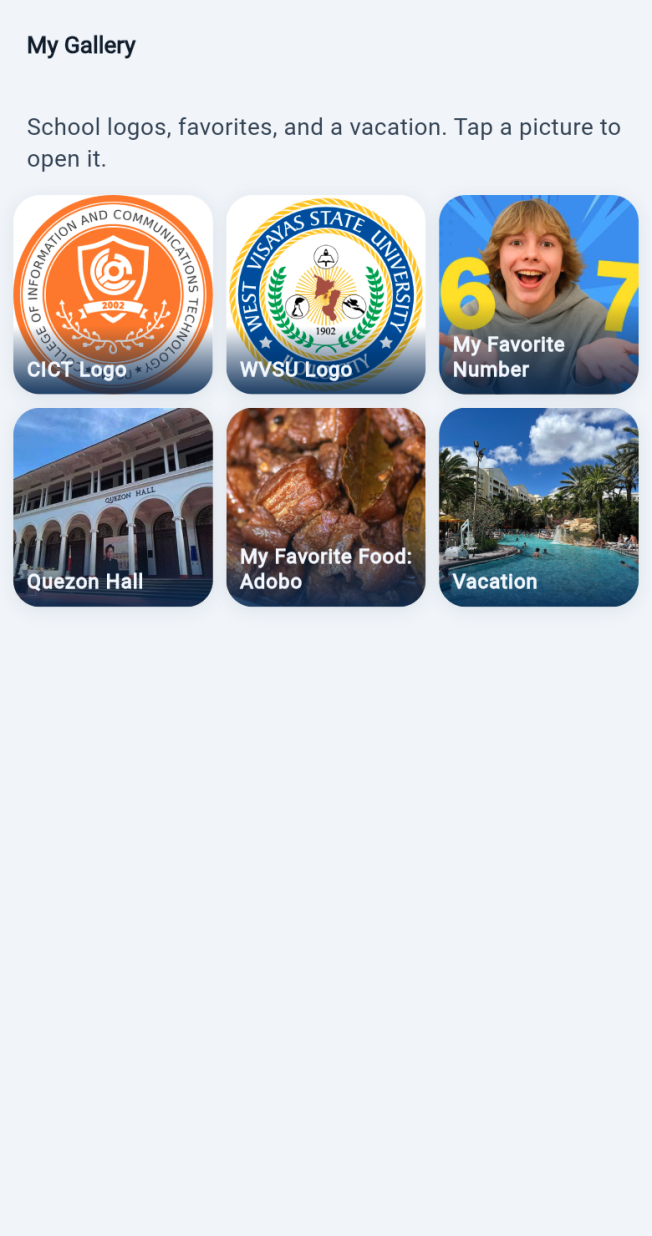

Figure 8. Gallery grid
Six images are displayed: CICT logo, WVSU logo, favorite number, Quezon Hall, adobo, and vacation.

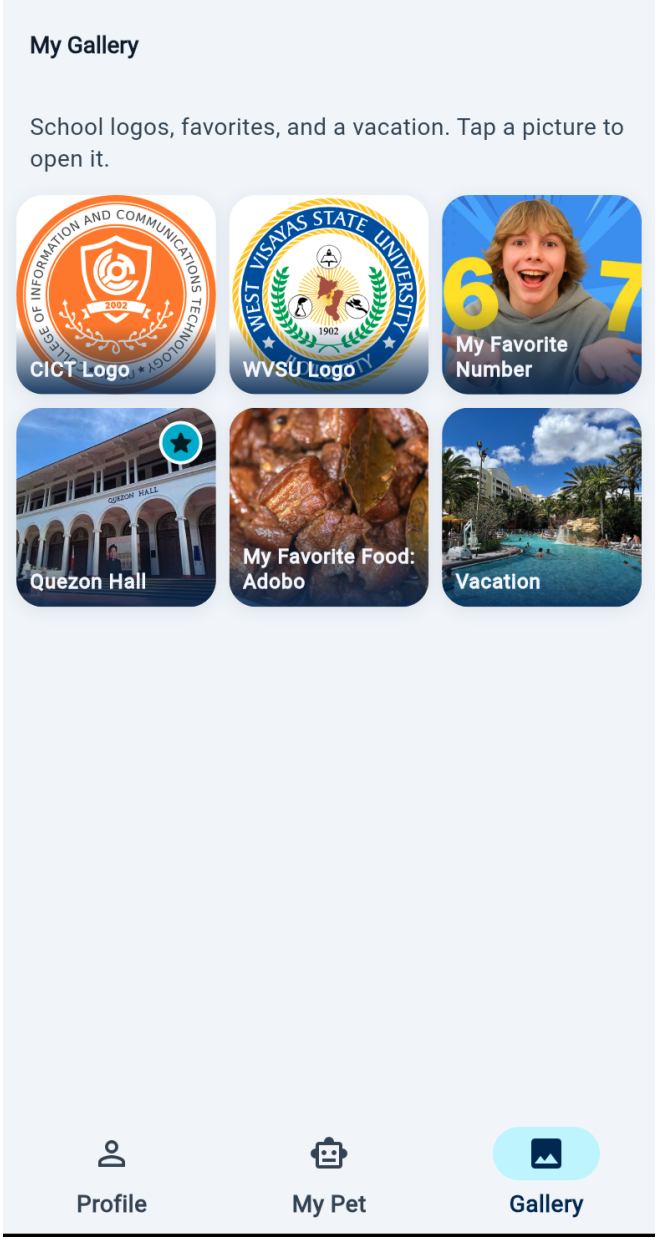

Figure 9. Favorite marked in the gallery
A star badge marks Quezon Hall as the selected favorite.

Evidences (Screenshot that the application is working):

Photo detail

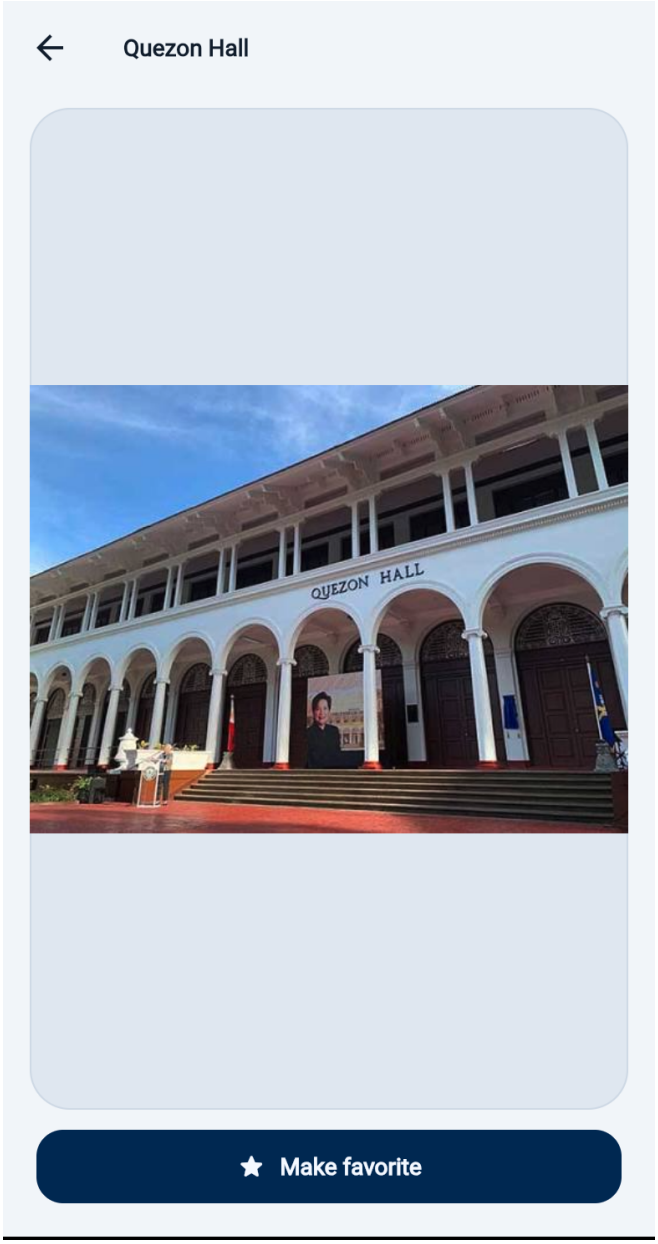

Figure 10. Photo detail screen
Quezon Hall opens in its own view with its caption, a back arrow, and the Make favorite button.
