

LYKA R. LAMPARERO

lykarlamparero@gmail.com | 0968 531 1581 | Iloilo City, Philippines

TECHNICAL SKILLS

- Languages & Frameworks: C++, Java (incl. JFrame), JavaScript, React.js, PHP, HTML, CSS, Bootstrap, Tailwind
- Databases: SQL, MySQL
- Data & Research: Data Collection, Technical Documentation, Literature Review
- Tools: VS Code, IntelliJ IDEA, NetBeans, Qt, draw.io, Figma
- Productivity: Google Workspace and Microsoft Office 365

EDUCATION

BS in Information Technology, *West Visayas State University*

August 2024 - Present

EXPERIENCE & SAMPLE WORK

AI Fest PH – AI Hackathon 2026 (Open Category)

Project Manager | Top 5 Finalist | August 3–5, 2026

- Led the initial ideation phase, including concept selection and proposal development for the project
- Managed project planning, task delegation, and prototype delivery under strict time constraints

LJN-OBDRAS — Lopez Jaena Norte Online Barangay Document Request and Appointment System

Team Lead | January - May 2026

- Led a team through the full SDLC to deliver a real-world system for Barangay Lopez Jaena Norte, from requirements gathering to deployment
- Conducted client interviews and field observation of barangay bureaucratic workflows, then translated findings into a digitized document-request and appointment system
- Digitized 12 of 16 barangay certificate types, scoping out the remaining 4 that required in-person processing by design
- Built the full-stack platform (PHP/MySQL) enabling residents to request documents and schedule pickups online with unique Tracking IDs
- Designed a role-based admin portal for officials to manage requests, appointments, and document types
- Presented iteratively to the client, incorporating feedback across development cycles; authored full system documentation with architecture, data-flow, and ER diagrams

ByteLog — Student Records Management System

Backend Developer | February - May 2025

- Built the backend logic for a centralized system managing student records, courses, enrollments, and grades
- Designed secure, role-differentiated data access for students, teachers, and administrators
- Focused on data integrity and relational schema design across linked entities

DishCision Maker — Rule-Based Meal Recommendation System

Full-Stack Developer | November - December 2025

- Designed and built a rule-based recommendation engine (Java/JFrame, MySQL) scoring meal options by cravings, protein preference, health goals, budget, and available ingredients
- Grounded scoring logic in research on consumer meal-decision behavior
- Built an ingredient-checklist feature and a full admin CRUD module for managing dish and ingredient data
